The Mor-Flexx Difference

Customers see for themselves that Mor-Flexx Works!

For Mortar, Stucco & Grout Repair Fix It with Mor-Flexx™

Your customers can see *The Mor-Flexx Difference* for themselves—and that means more sales for you. Unlike other mortar, stucco and grout repair products that dry hard, brittle, and soon re-crack, Mor-Flexx stretches and flexes for a long-lasting seal. Mor-Flexx has the sandy texture and color of mortar—and it's paintable—so repairs can literally disappear!

Mor-Flexx can be used to repair mortar, stucco, artificial stucco, EIFS, concrete foundation sidewalls and basement floors, even textured walls and ceilings. It adheres excellently to wood, concrete, brick, stone, block and other masonry surfaces.

Mor-Flexx is available in concrete beige and mortar grey that blend with the two most widely used masonry colors. Mor-Flexx comes in colorful plastic cartridges that stand-out in your concrete and masonry repair section. And each display is complete with a supply of educational brochures, card-mounted actual color samples and *The Mor-Flexx Difference* demonstration piece. Order your Mor-Flexx display now!
